Section 2. Service Area

- a. The map shows the area to be served. It is expected that the Primary Service Area will be the greatest benefactor, but the areas listed above will have the facility available for their use as they have in the past.
- b. The total population of the service area is 395,803. Of this number, 9,941 would be the direct service area.
- c. The population in the service area will be served by the numerous events and cultural activities held at the Vermontville Opera House including theatre productions, dances, crafts shows, art exhibits, and youth programs.
- d. The Maple Valley School district has used the facility as an historical resource and part of their Michigan History program. The school district also used the buildings for their theatrical productions, dances, and to display their art work. It is estimated that the school district activities directly involve approximately 68% of the population of the direct benefit area (Maple Valley School District).
